Von Willebrand factor A domain-related protein (Mus musculus 11 days pregnant adult female ovary and uterus cDNA, RIKEN full-length enriched library, clone:5031410123 product:VON WILLERDANT --
RELATED PROTEIN homolog).
Mammary tumor metastatized to lung. Tumor arose spontaneously; MEDLINE-22380257; PubMed=12477932; DOI=10.1073/pnas.242603899; Strausberg R.L., Feingold E.A., Grouse L.H., Derge J.G., Klausner R.D., Collins F.S., Wagner L., Shenmen C.M., Schuler G.D. DOMAIN: This sequence defines five distinct domains, two triple-helical domains (COL1 and COL2) and three nontriple-helical domains (NC1, NC2, and NC3).

PTM: The triple-helical tail is stabilized by disulfide bonds at

"Complete primary structure of two splice variants of collagen XI
and assignment of alpha i(XII) collagen (COL12A1), alpha i(IX)
collagen (COL9A1), and alpha i(XIX) collagen (COL19A1) to human
chromosome 6q12-q13.";
Genomics 41:236-242(1997).
-i- FUNCTION: Type XII collagen interacts with type I collagen-
containing fibrils, the COL1 domain could be associated with
surface of the fibrils, and the COL2 and NC3 domains may be
localized in the perifibrillar matrix (By similarity).
-i- SUBUNIT: Trimer of identical chains each containing 190 kDa o

SIMILARITY: Belongs to the fibril-associated collagens with interrupted helices (FACIT) family.

SIMILARITY: Contains 18 fibronectin type-III domains.

SIMILARITY: Contains 18 PN-terminal (TSPN) domain.

SIMILARITY: Contains 4 VWFA domains.

SIMILARITY: Belongs to the fibril-associated collage interrupted helices (FACIT) family.

SIMILARITY: Contains 18 fibronectin type-III domains SIMILARITY: Contains 1 TSP N-terminal (TSPN) domain. SIMILARITY: Contains 4 VWFA domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          skin, cornea, sclera, blood vessels, and periosteum. DEVELOPMENTAL STAGE: The long NC3 XIIA isoforms are predominant at early stages (ED7 and 11); at later stages of development (ED15 and 17) the short NC3 XIIB forms become the major forms. As the short NC3 forms become the major product, the long splice variant continues to be expressed in several tissues, even after birth. The long NC1 isoforms, XIIA-1 and XIIB-1, peak in 15-day old embryos and decrease in 17-day old ones. The expression of the short NC1 form XIIB-2 remains constant throughout late stages of embryonic development (ED15 and ED17).

PTM: The triple-helical tail is stabilized by disulfide bonds at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       as

WARP is used as a molecular marker, used for detecting a loss of ECM integrity in an animal subject, monitoring repair, regeneration or other disease processes in an animal subject and detecting a disease condition or a propensity for the development of a disease condition in an animal subject. The invention is useful for the manufacture of a medicament in the treatment of a disease condition of the ECM. The disease condition involves the cartilage, and is preferably arthritis. The invention is also used in gene therapy. The

                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated polynucleotide (I) comprising a concleotide sequence selected from any of 948 sequences (ABZ11119-CC ABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for cidentifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABP68902-ABP69849) are useful as molecular weight maturers, as a food supplement, for generating antibodies, in medical cimaging, screening and diagnostic assays and for treating cell-crossing treative diseases, autoimmune diseases (Multiple sclerosis, cor alzheimer's disease), autoimmune diseases (multiple sclerosis, cor alzheimer's disease), autoimmune diseases (multiple sclerosis, liver cor lung fibrosis, infections (bacterial, viral, fungal, parasitic), cor lung fibrosis, infections (bacterial, viral, fungal, parasitic), cor the printed specification, but was obtained in electronic format cor directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

New NOVX polypeptides and nucleic acid molecules useful for preventing or treating NOVX-associated disorders, e.g. cancer, diabetes, infection or obesity, and in chromosome mapping, tissue typing or pharmacogenomics.

Example 1; SEQ ID NO 2; 1880pp; English.

The invention relates to a novel isolated polypeptide (NOVX). A CC polypeptide of the invention has cytostatic, immunomodulator, neuroprotective, nootropic, anorectic, antidiabetic, antimicrobial, and cc antilipaemic activity, and may have a use in gene therapy, and as a cc vaccine. The polypeptides are encoded by NOVX polymucleotides comprising a pecification. The polypeptide is useful in the manufacture of a medicament for treating a syndrome associated with a human disease. The polypeptide and antibody are useful in diagnosing, and treating or preventing NOVX-associated disorders, e.g. cancer, cachexia, Alzheimer's disease, Parkinson's disease, obesity, diabetes, infectious diseases, metabolic syndrome X or dyslipidaemias. The nucleic acids are further used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The present sequence crepresents a NOVX polypeptide of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (WARP) which is a member of von Willebrand Factor A domain related-protein superfamily of extracellular matrix (ECM) proteins. WARP is used as a molecular marker, used for detecting a loss of ECM integrity in an animal subject, monitoring repair, regeneration or other disease processes in an animal subject and detecting a disease condition or a propensity for the development of a disease condition in an animal subject. The invention is useful for the manufacture of a medicament in the treatment of a disease condition of the ECM. The disease condition involves the cartilage, and is preferably arthritis. The invention is also used in gene therapy. The present sequence is mouse WARP protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated Willebrand Factor A-Related Protein polypeptide useful for the manufacture of a medicament in the treatment of a disease condition of the extracellular matrix, in particular arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 415 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 13; Page 74-75; 103pp; English.

                                                                                                                                     á
                                                                                                                                                                                                                                                                   The present sequence represents a kidney injury associated molecule (KIM) CC protein. KIM proteins can be administered therapeutically by expressing CC KIM encoding polynucleotides, to promote growth and/or survival of CC damaged tissue (e.g. renal tissue), since the KIM proteins are uprespulsated in injured or regenerating (especially renal) tissues. KIM CC fusion proteins, conjugates, antibodies and vectors can also be used CC therapeutically, e.g. these or the KIM proteins may be included with an acceptable carrier in pharmaceutical compositions, useful for therapy/CC prophylaxis of conditions associated with disfunction/disregulation of CC KIM genes or proteins, especially renal diseases or impairments of renal function in humans (e.g. acute renal diseases or impairments of renal CC polynucleotides can be used to produce antisense sequences which, when CC internalised into cells, can disrupt expression of a cellular KIM gene, also useful in therapy (e.g. to block the growth of tumours dependent on CC MIM for growth) or compositions. The proteins and polynucleotides are CC useful diagnostically e.g. to detect and quantify renal injury or impaired function), or abnormal responses to tissue injury (indicative of increased risk, or presence of, renal injury or impaired CC increased risk, or presence of, an autoimmume response or abnormal tissue of cused to locate KIM-producing/expressing KIM such as tumours arising CC from/affecting renal tissue), by contacting cells with an imageable KIM-cCC binding reagent and imaging reagent accumulation
                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cc which encode human secretory or membrane proteins represented by AAB8317 c AAB88419. Included in the invention are primers AAF93917 - AAF94295 and CC AAF62232 - AAF62235 which are used to isolate the CDNA sequences of the CC invention. The invention also includes methods for the production of CC antibodies directed against the proteins, and cDNA sequences, which can CC be used in vaccines. The polynucleotide sequences can be used in gene CC used in the prevention, treatment and diagnosis of diseases associated CC with inappropriate secretory protein/membrane protein expression. The CC in diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples. CC They may also be used as antigens in the proteins/membrane polypeptides and their role in metabolism. The CC polypeptides may be used as antigens in the production of secretory cotains/membrane polypeptides and their role in metabolism. The CC polypeptides may be used as antigens in the production of antibodies against them and in assays to identify modulators (agonists and CC antagonists) of expression and activity. The antibodies and antagonists of detecting the presence of the polypeptides in samples (e.g. by enzyme CC linked immunosorbant assay (ELISA). Examples of diseases which may be CC treated include rheumatoid arthritis and diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               membrane proteins, and their coding sequences. The present sequence is one such protein sequence. The coding sequences of the invention are useful for examination and diagnosis of abnormality of the human secretary proteins and in gene therapy methods. The coding sequences and proteins are useful as candidates for medicines or as target molecules for developing medicines. Antibodies against the proteins of the invention are useful for treating diseases that are associated with the proteins. Note: The sequence data for this patent did not form part of the printed specification, but was obtained from sequence information

N-PSDB; AAF91860.

Nucleic acid molecules encoding human secreted proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's and Parkinson's diseases and cancers.

Claim 11; Page 532-533; 607pp; English.

AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB8744-AAB87443 represent the proteins they encode. AAB87414-AAB8745 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the protein for the new genes. Specific uses are described for each of the 2 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., Alzheimer's disease, parkinsonns's disease), organitive disorders, schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, gastrointestinal disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell counture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in indiagnostic immunoassays e.g., radioimmunoassays or enzyme linked immunoassays e.g., radioimmunoassays or enzyme linked immunoassays or enzyme linked immunoassays or enzyme linked immunoassays compared in the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                      The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HAA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, digestive disorders (e.g. Crohn's disease, ulcerative colitie, immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetes), haematopoietic disorders, neural disorders (e.g. Albeimer's, payrings).

The invention relates to a novel albumin fusion protein. The inv further relates to: a composition comprising the albumin fusion and a pharmaceutical carrier; a kit comprising the composition or albumin fusion protein formula; a method of treating a disease of albumin fusion protein formula; a method of treating a disease of albumin fusion protein formula; a method of treating a disease of albumin fusion protein formula; a method of treating a disease of albumin fusion protein formula; a method of treating a disease of albumin fusion protein formula; a method of treating a disease of albumin fusion protein formula; a method of treating a disease of albumin fusion protein.

CC disorder in a patient comprising the step of administering the albumin CC that is modulated by Therapeutic protein: X, or its fragment or variant; CC a method of extending the shelf life of Therapeutic protein: X or its fragment or variant; a nucleic acid molecule comprising a polynucleotide CC sequence encoding the albumin fusion protein; a vector comprising the nucleic acid molecule of the albumin fusion protein; and a host cell CC comprising the nucleic acid molecule of the albumin fusion protein. The CC albumin fusion protein and its compositions have the following CC activities: cytostatic, antianaemic, antiarthritic, antiasthmatic, anti-ccell CC cardiant, nootropic, antilpaemic, nephrotropic, untiasthmatic, antiarrhythmic, CC cardiant, nootropic, antilpaemic, nephrotropic, uropathic, cardiant, nootropic, antipaemic, nephrotropic, uropathic, anabolic, hypertensive, and vulnerary. The albumin fusion protein nucleic acid may be used in gene therapy to treat disorders. The albumin fusion protein is cuseful for disgnosing, treating, preventing or ameliorating diseases or cisorders comprising indication: Y. The diseases or disorders include: cancer (e.g. leukaemia, colon, bone, breast, liver or lung cancer), compositic diseases (e.g. anaemia, Hodgkin's disease, acute lymphocytic anaemia, multiple myeloma, arthritis, asthma, AIDS, autoimmune disease, inflammatory bowel disease, psoriasis or Lyme classase; or cachexia, variaccele, penile carcinoma, ovarian adenocarcinoma or Sertoli-leydig tumours), musculoskeletal diseases (e.g. rhabdomyomas heart disease, colon, bone, branch, gout, muscular dystrophy or cachexia), cardiac arrest, heat valve disease, hypernatraemia or hyporatraemia or syndrome, pateus vyndrome, beat disease, c.g. rhabdomyomas, heart disease, c.g. conditions or syndrome, heart disease (e.g. rhabdomyomas, heart disease, c.g. rhabdomyomas, heart disease (e.g. rha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Down's Byndrome, Patau Syndrome, Turner's Syndrome, Apert Syndrome or Tay -Sachs disease), excretory diseases (e.g. urinary incontinence, urinary tract infections or renal disorders), neural or sensory disease (e.g. Alzheimer's disease, Parkinson's disease, cerebral malaria, meningitis, cerebellar ataxia, attention deficit disorder, autism or obsessive compulsive disorder), respiratory disease (e.g. emphysema, lung cancer or occupational lung disease), endocrine diseases (e.g. diabetes, Addison's disease or glomerulonephritis), digestive diseases (e.g. portal hypertension, irritable bowel disease, gastric atrophy or pancreatitis) or connective tissue or epithelial diseases (e.g. Crohn's disease, scleroderma, wound healing or epidermolysis bullosa). This sequence represents a therapeutic protein x relating to the albumin fusion protein of the invention. The sequence listing data for this specification was dowloaded from the USPTO website.

preventing, treating or ameliorating Parkinson's diseases and cancers. Nucleic acid molecules encoding human secreted proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's

Disclosure; Page 18; 607pp; English.

CC and their corresponding secreted proteins are useful for preventing, cc treating or ameliorating medical conditions, e.g., by protein or gene conterapy. Pathological conditions can be diagnosed by determining the gene camount of the new protein in a sample or by determining the presence of camount of the new genes. Specific uses are described for each of the cs genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of cambormalities, haematopoietic disorders, diseases of the immune system, cc allorgies, neurological disorders (e.g., rheumatoid arthritis), inflammation, cc allorgies, neurological disorders (e.g., Alzheimer's diseases, cancer, thunours, foetal and developmental cc disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cc ardiovascular disorders, anglogenic disorders, schizophrenia, asthma, skin cc disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cc gastrointestinal disorders, pregnancy-related disorders, endocrine cc disorders, and infections. The proteins can also be used to aid wound comborn, to maintain organs before transplantation, for supporting cell collure of primary tissues, to regenerate tissues, to identify their conjunte ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

CC Antibodies specific for a protein of the invention can be used in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked cc immunosorbent assay (ELISA). The present sequence represents a human cc secreted protein fragment referred to in the disclosure of the invention AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB87413 represent the proteins they encode. AAB87414-AAB87454 represent human secreted protein fragments. The genes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 immune system disorder; AIDS; autoimmune disease; rheumatoid arthritis inflammation; allergy; neurological disorder; Alzheimer's disease; Parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; angiogenic disorder; kidney disorder; gastrointestinal disorder; pregnancy-related disorder; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; binding partner identification.
                           AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB87413 represent the proteins they encode. AAB87414-AAB87454 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the
                                                                                                                                                                                                                                                                                               Nucleic acid molecules encoding human secreted proteins, used preventing, treating or ameliorating a disorder, e.g. Alzheim Parkinson's diseases and cancers.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC mutations in the new genes. Specific uses are described for each of the CC 52 genes, based on the tissues in which they are most highly expressed, CC and include developing products for the diagnosis or treatment of CC proliferative disorders, cancer, tumours, foetal and developmental CC abnormalities, haematopoietic disorders, diseases of the immune system, CC AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, CC allargies, neurological disorders (e.g., Alzheimer's disease, cognitive disorders, schizophrenia, asthma, skin CC disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, CC cardiovascular disorders, angiogenic disorders, kidney disorders, endocrine CC disorders, and infections. The proteins can also be used to aid wound CC disorders, and epithelial cell proliferation, to prevent skin aging due to CC sumburn, to maintain organs before transplantation, for supporting cell CC culture of primary tissues, to regenerate tissues, to identify their CC cognate ligands or binding partners, and in chemotaxis, and can be used CC as a food additive or preservative to modify storage properties.

CC Antibodies specific for a protein of the invention can be used in dispostic immunosassys e.g., radioimmunosassy or enzyme linked CC immunosassys (ELISA). The present sequence represents a human CC secreted protein fragment referred to in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
